As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering the wisest use of our land and water resources, protecting our fish and wildlife, preserving the environmental and cultural values of our national parks and historical places, and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to assure that their development is in the best interest of all our people. The Department also has a major responsibility for American Indian reservation communities and for people who live in island territories under U.S. administration.

PROPAGATION AND DISTRIBUTION OF FISHES FROM HATCHERIES AND FISHERY RESOURCE MANAGEMENT FOR FY 1980

INTRODUCTION

This report on fishes and fish eggs distributed by national fish hatcheries for the period October 1, 1980, to September 30, 1981, is a continuation of a series of publications issued since 1872. Records of hatchery outputs were published in the annual Commissioner's Report of the U.S. Commission of Fish and Fisheries through 1903 and in the Annual Report of the Commissioner of Fisheries of the U.S. Department of Commerce, until 1940. From 1941 through 1962, these tabulations were presented as "Statistical Digest". Beginning in 1963, these reports became known as the "Fish Distribution Report". Report No. 2 for 1965 and 1966 established the fiscal year as the period of coverage. In 1976, the fiscal year time frame was changed from July through June to October through September. Report No. 11 recorded fish distribution for the period of July 1, 1975 through September 20, 1976, which included the 3 month transition quarter—July, August and September 1976. All future fish distribution reports will coincide with the October through September fiscal year.

The Hatcheries and Fishery Resource Management system produces primarily salmon, trout, catfish, pike, bass, and sunfish. Several additional species of fish are produced and collected for use as test animals in various research projects.

The goal of the Fish and Wildlife Service is to conserve the Nation's freshwater and anadromous fishery resources for the benefit of the people. Distribution of fish from the Federal hatchery system assists in meeting this goal in accordance with the following objectives:

a. To restore and/or maintain existing freshwater and anadromous fishery resources in suitable streams, rivers or lakes of the United States.

b. To increase the fisheries by restoring destroyed or depleted fishery resources.

c. To create greater fisheries by upgrading existing fish populations, developing new bodies of water, and introducing new species.

d. To aid States in the management and development of fishery resources.

e. To protect the Nation's fisheries by limiting the introduction or distribution of diseased fish and their attendant pathogens.

f. To control the introduction and population levels of exotic species damaging to the fishery resources or aquatic ecosystem.

g. To carry out responsibilities established by treaties and other commitments of the Federal Government to maintain or restore fishery resources.

It is the policy of the Fish and Wildlife Service to allocate or distribute the output of its Fish Hatcheries in the following order of priority.

(1) International waters, such as coastal and Great Lakes areas, and waters on land owned, controlled and managed by Federal agencies or recognized Indian tribes (international treaties or cooperative agreements usually involved).

(2) Waters on land owned by the Federal Government and managed by State agencies (cooperative agreements usually involved).

(3) Waters on State or privately owned land managed by a Federal Agency (cooperative agreements usually involved).

(4) Waters which border or cross State boundaries.

(5) Waters owned and managed by State agencies (cooperative agreements occasionally involved).

(6) Privately owned waters.

The present system for allocating fish to the several classes of water has been used by the Federal Government since 1949. The records system used to report stocking of fish was completely revised as of January 1, 1966, to provide more current data and better identification of the various program areas. As a result of the development of fishery management programs, long-range stocking requirements have been determined in many States and Federal areas. Fish stocking requests are now provided by fishery program managers for the various management programs, and it is no longer necessary or desirable to receive individual stocking requests for public waters. Fish are allocated, however, on an individual basis for newly created waters and special programs that meet the present Fish and Wildlife Service criteria for stocking.
